

AI Roast Generator - Prompts and Bug Fixing:

Initial Prompt Used:

I need to make a C++ program for my assignment called AI Roast Generator. The program should include the following:

1. Ask the user to enter their name

1. Store around 10 funny roast templates in a vector where {name} is a placeholder that gets replaced by the user's actual name
2. Randomly pick a different roast every time the program runs using rand() and srand() with time(0)
3. Replace {name} in the selected roast with whatever name the user entered
4. Display the final roast message on the screen Here are some example roasts:
 - "{name} writes code so slow that even a turtle switched to Python."
 - "If procrastination were an Olympic sport, {name} would already have a gold medal."
 - "{name} doesn't debug code — they negotiate with bugs." Also add comments in the code so I can understand what each part is doing.

Sonnet 4.6 ▾ |||

Here's the complete C++ code:

```
cpp

#include <iostream>
#include <vector>
#include <string>
#include <cstdlib>
#include <ctime>
using namespace std;

// Function to replace {name} placeholder with actual user name
string replaceName(string roast, string name) {
    string placeholder = "{name}";
    int pos = roast.find(placeholder);

    // Keep replacing until no more {name} found
    while (pos != string::npos) {
        roast.replace(pos, placeholder.length(), name);
        pos = roast.find(placeholder);
    }
    return roast;
}
```

Write a message...

Sonnet 4.6 ▾

```

int main() {
    // Seed the random number generator with current time
    srand(time(0));

    // Store all roast templates in a vector
    vector<string> roasts = {
        "{name} writes code so slow that even a turtle switched to Python.",
        "If procrastination were an Olympic sport, {name} would already have a gold",
        "{name} doesn't debug code – they negotiate with bugs.",
        "{name}'s WiFi password is probably 'password123'.",
        "Scientists studied {name}'s attention span and accidentally cured insomnia.",
        "If laziness had a brand ambassador, it would be {name}.",
        "{name}'s code runs so slowly that even dial-up internet feels fast.",
        "{name} doesn't need an alarm clock – disappointment wakes them up every mor",
        "The only exercise {name} gets is jumping to conclusions.",
        "{name} tried to think outside the box but couldn't find the box."
    };

    // Ask user to enter their name
    string userName;
    cout << "Enter your name: ";
    cin >> userName;

```

Write a message...

Sonnet 4.6 ▾ |||

```

cin >> userName;

// Randomly select a roast from the vector
int randomIndex = rand() % roasts.size();

// Replace {name} with actual user name
string finalRoast = replaceName(roasts[randomIndex], userName);

// Display the final roast
cout << "\nYour Roast: " << finalRoast << endl;

return 0;
}

```

What this code does step by step:

- `srand(time(0))` — makes sure a different roast is picked every run
- `vector<string> roasts` — stores all 10 roast templates
- `cin >> userName` — takes the name input from user
- `rand() % roasts.size()` — picks a random index between 0-9
- `replaceName()` — finds and replaces every `{name}` with actual name

Sonnet 4.6 ▾ |||

First Output:

```
AI_RoastGenerator.cpp X AI_Roast_Generator.cpp
AI_RoastGenerator.cpp > replaceName(string, string)
9  string replaceName(string roast, string name) {
14  while (pos != string::npos) {
16      pos = roast.find(placeholder);
17  }
18  return roast;
19  }
20
21  int main() {

PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> g++ AI_RoastGenerator.cpp
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> ./a
Enter your name: Astha

Your Roast: Astha writes code so slow that even a turtle switched to Python.
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> g++ AI_RoastGenerator.cpp
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> ./a
Enter your name: Astha

Your Roast: Astha doesn't debug code rÇö they negotiate with bugs.
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> g++ AI_RoastGenerator.cpp
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> ./a
Enter your name: Astha

Your Roast: Astha doesn't need an alarm clock rÇö disappointment wakes them up every morning.
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> g++ AI_RoastGenerator.cpp
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> ./a
Enter your name: Astha Patel

Your Roast: Astha tried to think outside the box but couldn't find the box.
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> g++ AI_RoastGenerator.cpp
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> ./a
Enter your name:
Astha

Your Roast: If procrastination were an Olympic sport, Astha would already have a gold medal.
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> g++ AI_RoastGenerator.cpp
PS C:\Users\astha\Programing languages\F0CP II - Lab Manual> ./a
Enter your name:
```

Bug Fixing Prompt:

Okay, I ran my AI Roast Generator C++ program but there are some problems.

1. When I enter the name "Asthā", some roasts are showing weird symbols like ΓÇö instead of a dash. For example:

"Asthā doesn't debug code ΓÇö they negotiate with bugs."

2. The program seems to give the same roast on the first run every time, I think there is some issue with the random function.

3. When I enter a full name like "Asthā Patel", the program only reads "Asthā" and ignores the last name.

4. When I press Enter without typing any name, nothing happens, so we need to fix that.

Fix these bugs and give me the correct code.

Here's the fully corrected code with all 4 bugs fixed:

```
cpp
#include <iostream>
#include <vector>
#include <string>
#include <cstdlib>
#include <ctime>
```

Claude is AI and can make mistakes. Please double-check responses.

Final output:

```
AI_Roast_Generator.cpp > ...
1  #include <iostream>
2  #include <vector>
3  #include <string>
4  #include <cstdlib>
5  #include <ctime>
6  using namespace std;
7
8  // Function to replace {name} placeholder with actual user name
9  string replaceName(string roast, string name) {
10     string placeholder = "{name}";
11     int pos = roast.find(placeholder);
12 }
